

Katherine Brutsche

Bio

Katherine Brutsche received her Bachelor of Science degree in Geosciences, with dual emphasis in Geology and Earth Science Education from Virginia Tech. She is currently a Master's student and Teaching Assistant at the University of South Florida. Her thesis research focuses on the sediment characteristics and morphological impacts of the nearshore placement of dredged material in Fort Myers Beach, Florida. She is also involved with research on the Deepwater Horizon oil spill, physical monitoring of the beaches in Pinellas County, and experiments involving nearshore sediment transport.
